

ABSTRACT OF THE DISCLOSURE

{The present invention relates to a cyclic tertiary amine
 compound represented by a formula (1) and an organic
 5 luminescent device.

(1)

wherein A represents an alkyl group having 1 to 6 carbon atoms,
 a substituted or unsubstituted aryl group, a substituted or
 10 unsubstituted aralkyl group, or a substituted or
 unsubstituted heterocyclic group, and four As may be all the
 same or partly different; Y¹ represents a substituted or
 unsubstituted arylene group, or a substituted or
 unsubstituted heterocyclic divalent group; Y² represents a
 15 group represented by a formula (2), a substituted or
 unsubstituted condensed ring arylene group, or a substituted
 or unsubstituted heterocyclic divalent group,

wherein R₁ to R₈ in the formula (2) independently represents a hydrogen atom, a halogen atom, an alkyl or alkoxy group having 1 to 6 carbon atoms, an aryl group or a heterocyclic group; and Z represents single bond, an arylene group, -CH₂-, -CH=CH-, -C≡C-, -C(CH₃)₂-, -CO-, -O-, -S- or -SO₂-.

Use of the cyclic tertiary amine compound as a hole transport material, a hole injection material or an organic electroluminescent material can provide organic EL devices having high luminous efficiency and a long service life.
